Sharpak Bridgwater

Sharpak Yate

Rigid packaging deserves a flexible choice

Through its manufacturing facilities in Bridgwater and Yate Sharpak is able to offer packaging solutions to the meat industry based on either of the major packaging materials, PET or Polypropylene (PP).

Both materials offer distinct benefits to the meat processor and retailer. These include high levels of clarity, outstanding barrier performance for optimal shelf life and an industry leading use of recycled materials to lessen environmental impact.

In these difficult economic times, with volatile pricing and a changeable material supply picture, Sharpak represents a reassuring presence in the UK market, offering a choice of materials and blends supported by advanced research, materials development capabilities and quality control.

- Sharpak provide poultry, red meat and fish trays in PP and APET across an unparalleled range of sizes.
- Our EcoPET material offers a good range of physical properties and an enhanced environmental profile.
- c-LOW is a significant breakthrough in carbon low PP material developed at Sharpak's own on-site laboratory. c-LOW harnesses nature's natural resources to offer a solution with substantially reduced carbon footprint compared with conventional PP.
- Sharpak has evolved its material range to meet environmental challenges. A substantial proportion of its range now contains recycled materials from approved post consumer waste.
